Appendix 1: Experimental Instrument

This appendix reproduces the text used in the experiment (translated into English).

[Introduction]

[For all respondents]

The following questions are about international affairs. We will describe an international crisis scenario that may occur in the future, and ask for your opinion of the way the crisis is handled.

[Experimental Stimuli]

[Control Group]

China and Japan have a long-standing dispute over the sovereignty of a piece of territory. In a recent turn of events, Japan started to install structures on the disputed territory.

The Chinese leader said that if the installation continued, China would take military action. Japan continued to install structures on the disputed territory. In the end, the Chinese leader decided not to take military action against Japan.

[For Treatment 1]

China and Japan have a long-standing dispute over the sovereignty of a piece of territory. In a recent turn of events, Japan started to install structures on the disputed territory.

The Chinese leader said that if the installation continued, China would take military action. Japan continued to install structures on the disputed territory. The UN Secretary-General called

for peace and offered UN mediation. In the end, the Chinese leader decided not to take military action against Japan.

[For Treatment 2]

China and Japan have a long-standing dispute over the sovereignty of a piece of territory. In a recent turn of events, Japan started to install structures on the disputed territory.

The Chinese leader said that if the installation continued, China would take military action. Japan continued to install structures on the disputed territory. The United States warned that it would intervene militarily if Japan is attacked. In the end, the Chinese leader decided not to take military action against Japan.

[For Treatment 3]

China and Japan have a long-standing dispute over the sovereignty of a piece of territory. In a recent turn of events, Japan started to install structures on the disputed territory.

The Chinese leader said that if the installation continued, China would take military action. Japan continued to install structures on the disputed territory. In the end, the Chinese leader decided not to take military action against Japan. The leader declared that the Chinese people are a peaceful people that will put utmost effort into resolving the conflict without the use of force.

[For Treatment 4]

China and Japan have a long-standing dispute over the sovereignty of a piece of territory. In a recent turn of events, Japan started to install structures on the disputed territory.

The Chinese leader said that if the installation continued, China would take military action. Japan continued to install structures on the disputed territory. In the end, the Chinese leader decided not to take military action against Japan. The leader explained that a military conflict will derail China's economic development and prosperity.

[For Treatment 5]

China and Japan have a long-standing dispute over the sovereignty of a piece of territory. In a recent turn of events, Japan started to install structures on the disputed territory.

The Chinese leader said that if the installation continued, China would take military action. Japan continued to install structures on the disputed territory. In the end, the Chinese leader decided not to take military action against Japan, but imposed a series of sanctions and boycotts to punish the Japanese economy.

[For Treatment 6]

China and Japan have a long-standing dispute over the sovereignty of a piece of territory. In a recent turn of events, Japan started to install structures on the disputed territory.

The Chinese leader warned that the Japanese Government must be held fully responsible for the consequences arising there from if Japan failed to remove its structures on the territory. Japan continued to install structures on the disputed territory. In the end, the Chinese leader decided not to take military action against Japan.

[Summary]

To summarize, China and Japan have a long-standing dispute over the sovereignty of a piece of territory.

- Japan started to install structures on the disputed territory

[Respondents received additional bullet points based on their assigned condition]

[Control Group]

- The Chinese leader said that if the installation continued, China would take military action
- Japan continued to install structures on the disputed territory
- The Chinese leader decided not to take military action against Japan

[For Treatment 1]

- The Chinese leader said that if the installation continued, China would take military action
- Japan continued to install structures on the disputed territory
- The UN Secretary-General called for peace and offered UN mediation
- The Chinese leader decided not to take military action against Japan

[For Treatment 2]

- The Chinese leader said that if the installation continued, China would take military action

- Japan continued to install structures on the disputed territory
- The United States warned that it would intervene militarily if Japan is attacked
- The Chinese leader decided not to take military action against Japan

[For Treatment 3]

- The Chinese leader said that if the installation continued, China would take military action
- Japan continued to install structures on the disputed territory
- The Chinese leader decided not to take military action against Japan
- The leader declared that the Chinese people are a peaceful people that will put utmost effort into resolving the conflict without the use of force

[For Treatment 4]

- The Chinese leader said that if the installation continued, China would take military action
- Japan continued to install structures on the disputed territory
- The Chinese leader decided not to take military action against Japan
- The leader explained that a military conflict will derail China's economic development and prosperity

[For Treatment 5]

- The Chinese leader said that if the installation continued, China would take military action
- Japan continued to install structures on the disputed territory

- The Chinese leader decided not to take military action against Japan, but imposed sanctions and boycotts to punish the Japanese economy

[For Treatment 6]

- The Chinese leader warned that Japan must be held fully responsible for the consequences arising there from if Japan failed to remove the structures
- Japan continued to install structures on the disputed territory
- The Chinese leader decided not to take military action against Japan

[Dependent Variable]

[For all respondents] Do you approve, disapprove, or neither approve nor disapprove of the way the Chinese leader handled the situation?

[If approve]: Do you approve very strongly, or only somewhat?

[If disapprove]: Do you disapprove very strongly, or only somewhat?

[If neither]: Do you lean toward approving of the way the Chinese leader handled the situation, lean toward disapproving, or don't you lean either way?
